KEDRY PLUS is a beautifully designed, pre-engineered, aluminum pergola system that is perfectly suited for a wide variety of residential or commercial applications. It provides adjustable shade and air circulation, while offering a waterproof solution for rain protection. Kedy Plus is installed level and does not require pitch.

Water runoff is managed by a system of internal gutters that direct water down through the vertical posts, avoiding edge drips and pooling.

It's easy to **enclose your space** with year-round weather protection, including an extensive variety of transparent, light filtering and darkening fabrics.

Automation is easily achieved with the use of smartphone and tablet apps for convenient remote control of the system.

KEY BENEFITS OF KEDRY PLUS

- All Kedry pergolas are tested and certified for installation in all 50 states
- Integrated rain management provides waterproof protection
- Optional LED lighting provides soft, dimmable illumination on demand
- A variety of side enclosure options is available
- Limited lifetime warranty on frame
